

REframing Elicitation

2nd International Workshop on Requirements Engineering Frameworks
at the IEEE Requirements Engineering Conference RE 2023
04 September 2023, Hannover, Germany

How do we effectively elicit the information we need for creating requirements?

The workshop is a forum for exchanging experiences across academic research and industrial practice on frameworks for requirements elicitation: What methods and approaches do we use to get requirements information? – Especially in roles like requirements engineer, business analyst, product manager, product owner, UX designer, and systems engineer.

Over time, as software and software engineering (SE) processes have evolved, the challenges of elicitation and the techniques and methods used have evolved, too. The workshop aims at understanding better what elicitation means today and how it needs to improve in the future.

Workshop Questions

Specific questions that the workshop wants to address include but are not limited to:

- What methods do we use for gaining requirements?
- How can projects find elicitation methods that work for them?
- What challenges does requirements elicitation face today?
- What is the industry's experience with the use of requirements elicitation frameworks?

Submission Formats

The workshop offers submission formats particularly aimed at industrial practice, including:

Extended Abstract (up to 2 pages, excluding references). Such abstracts could share practical experiences with elicitation frameworks or visions for them. Authors are invited to share their best practice experience with requirements elicitation frameworks.

Presentation only (2-3 slides expressing the main message of the contribution). Primarily participants from industry are invited to share their experiences as presentations. Presentations will not be included into the proceedings publication.

Important Dates

Submissions due: Tuesday, 13 June 2023

Notification of acceptance: Friday, 07 July 2023

Workshop date: Monday, 04 September 2023
